Kilit

BED BUG TRAP

Thank you for choosing Kilit. Here is how to set up your 4 cups in 2 minutes, and how to activate your lifetime guarantee.

IN YOUR BOX

4 trap cups

4 adhesive pads

1 brush and **1** dustpan

HOW DOES IT WORK?

1. **It climbs.** The outer wall is rough: the bug climbs up easily.
2. **It slips.** The inner groove is smooth: it falls in.
3. **It stays trapped.** It can't climb out or reach your bed.

> Bed bugs can't fly or jump: to reach you, they have to climb a bed leg. No insecticide, no smell: the trap is purely mechanical.

SET UP IN 3 STEPS

1. **Move the bed away from the wall** by at least a few centimetres.
2. **Keep the bedding off the floor.** Duvets and blankets must not touch the floor.
3. **Place one cup under each leg.** One cup per leg, never stacked. On a slippery floor (wood, tiles), first stick an adhesive pad under the cup.

> Your bed legs must fit inside the cup: up to 10 cm across for a round leg, 7 × 7 cm for a square leg.

CHECKING AND CARE

EVERY MORNING

A glance into the groove of each cup tells you whether bed bugs are present.

ONCE OR TWICE A MONTH

Empty the cups with the brush and dustpan provided, over a bag that you seal and throw away.

DURING A TREATMENT

Leave the cups in place: they show whether the population is falling and whether the treatment worked.

> The trap detects and blocks bed bugs that climb the bed legs. In case of infestation, it does not replace professional treatment.

PRECAUTIONS

- Keep away from young children: the pads and accessories are small.
- Do not put in the mouth.
- Get help to lift the bed.

ACTIVATE YOUR LIFETIME GUARANTEE

A Kilit trap breaks or stops working? We replace it. Fill in this form, it takes 1 minute.
