Kilit

PANTRY MOTH TRAP

Thank you for choosing Kilit. Here is how to prepare your cupboards, place your pheromone traps and activate your lifetime guarantee.

IN YOUR BOX

5 sticky pheromone traps, about 10 × 15 cm

HOW DOES IT WORK?

The trap releases the female's pheromone. Males follow it and get stuck. Without males, females are no longer fertilised: the next generation is never born. The trap contains no insecticide.

> The trap attracts pantry moths (Indian meal moth, flour moth), not clothes moths.

THE METHOD IN 4 STEPS

1. **Sort.** Empty the cupboard and throw away packets that are pierced or contain silky threads.
2. **Freeze.** Put the packets you keep in the freezer for 48 hours.
3. **Seal.** Wipe the shelves and grooves with a damp cloth, then store flour, rice and dried fruit in closed jars.
4. **Trap.** Remove the film, fold the trap into a triangle or hang it up. One trap per cupboard or pantry.

WHAT TO EXPECT?

DAYS 1 TO 7

Few or no catches: that's normal, males take time to arrive.

WEEKS 2 TO 4

Catches increase: the males are being trapped.

AFTER THAT

Catches fall as the population dies out. Replace the trap after 8 weeks.

PRECAUTIONS

- Pheromone trap, insecticide-free. Do not swallow.
- Keep out of reach of children and pets.
- Avoid contact of the glue with skin, hair and clothing.
- Do not place directly on food. Wash your hands after handling.

ACTIVATE YOUR LIFETIME GUARANTEE

A Kilit trap breaks or stops working? We replace it. Fill in this form, it takes 1 minute.
