Kilit

FUNGUS GNAT TRAPS

Thank you for choosing Kilit. Here is how to push your traps into the potting soil and activate your lifetime guarantee.

IN YOUR BOX

PACK OF 50

25 butterfly and 25 sun-shaped traps, 8 × 12 cm, each with its own stake.

PACK OF 20

20 double-sided yellow traps with stakes.

HOW DOES IT WORK?

Fungus gnats (sciarids) lay their eggs in the top few centimetres of damp soil. The bright yellow attracts flying adults, the glue holds them. No active substance, no smell: the action is purely physical.

SET UP IN 3 SECONDS

1. **Peel off the protective film** on both sides.
2. **Push** the stake 2 to 3 cm into damp soil, holding it near its base. The trap stays just above the soil.
3. **Watch**: the first catches appear within the first week.

> Allow 1 to 2 traps per pot, and 3 to 4 for a seed tray.

CHECKING AND CARE

EVERY WEEK

Count the catches: you can see whether the population is falling.

REPLACING

When the surface is covered, or after 3 months.

WATERING

The glue is water- and UV-resistant: indoors, seedlings, greenhouse, conservatory, balcony.

> The traps also catch whiteflies, winged aphids and fruit flies.

PRECAUTIONS

- Keep out of reach of children and pets.
- Avoid contact of the glue with skin, hair and clothing. Use cooking oil to remove the glue.
- Store unused traps flat, out of the sun.

ACTIVATE YOUR LIFETIME GUARANTEE

A Kilit trap breaks or stops working? We replace it. Fill in this form, it takes 1 minute.
